PROFESSIONAL SUMMARY

Strategic Business Analyst with 5+ years of expertise at Amazon in driving Business Process Transformation and Requirements Engineering for global compliance and automation initiatives. Proven track record in Strategy Analysis, overseeing 38M+ ASIN exposure and delivering \$2M+ in risk mitigation value through the design of ML/NLP-backed risk containment frameworks. Expert in the full SDLC, specialized in translating complex regulatory mandates into structured Business Requirement Documents (BRDs), Functional Specifications, and Gap Analysis (AS-IS/TO-BE). Adept at Solution Evaluation and Validation, facilitating cross-functional stakeholder workshops to scale automation coverage from 3.5% to 60% YoY across 8+ global marketplaces.

STRATEGIC PROGRAM PORTFOLIO (AMAZON)

Benefits Realization & Business Value:

Delivered \$2M+ (AED 7M+) in Risk Mitigation Value by leading the Business Process Transformation of Amazon's global compliance portfolio from manual oversight to an ML-backed automated governance model.

Scaled high-risk oversight from 3.5M to **38M annual ASIN reviews** while maintaining 100% regulatory alignment across 8+ global marketplaces.

Requirements Analysis & Design Definition (RADD)

- **AI/ML & NLP Transformation:** Authored the Functional Specifications and logic for ML-driven audit enablement tools, including Entity Prediction Service (EPS) 2.0, Defect Prioritization Service (DPS), and Rule-to-ASIN Pre-Screeners (utilizing BERT and Semantic Matching) to automate detection.
- **Automation Frameworks:** Designed the Solution Architecture for the Website Audit Automation Framework and Mirage 2.0 (Image-Based Classification), integrating 200+ automated controls across 1,239 high-risk classes.
- **Enterprise Taxonomy Optimization:** Conducted Feasibility Studies and Gap Analysis to consolidate 35K disparate compliance classes into a unified, scalable taxonomy—reducing system complexity by 35%.

Strategic Analysis & Technical Ecosystem

- **Methodologies:** SDLC, Agile (Scrum/Kanban), BPMN 2.0 Process Modeling, and Solution Validation (UAT).
- **Analytical Stack:** SQL (Advanced Data Mining), AI Workbench, Clustering (K-Means, DBSCAN), NLP (Sentence Transformers).
- **Technical Governance:** Managed requirements lifecycle via Jira and Confluence within the AWS Cloud Environment.

BUSINESS ANALYSIS CORE HIGHLIGHTS

Requirements Engineering & Stakeholder Collaboration: Facilitated structured elicitation workshops for Website Audit 2.0; translated executive business drivers into traceable Functional Specifications and a prioritized Product Backlog for global engineering teams.

Process Modeling & Optimization (AS-IS/TO-BE): Engineered semi-automated catalog scanning workflows by mapping AS-IS and TO-BE processes to eliminate systemic bottlenecks; achieved a 40% reduction in manual latency and a 25% increase in detection accuracy.

Data-Driven Requirements Quality: Leveraged SQL-based Data Mining to perform Root Cause Analysis (RCA) on high-risk product classes; defined Non-Functional Requirements (NFRs) that reduced False

Positives by 56% and improved classification precision by 20%.

Solution Validation & Acceptance Testing (UAT): Directed the development of Governance Frameworks and Solution Validation Artifacts; defined Acceptance Criteria for ML-based classification enhancements, ensuring deliverables met all Business Requirements.

Business Process Improvement (BPI): Spearheaded the WW Class Consolidation project; utilized Clustering Analysis (K-Means/DBSCAN) to identify structural overlaps in 12.3K classes, driving global operational scalability and reducing maintenance overhead.

CORE COMPETENCY

Requirements Engineering: Elicitation (Workshops/Interviews), BRD/FRD/PRD, User Stories, Acceptance Criteria, MoSCoW Prioritization, Wireframing.

Process & Strategy: Gap Analysis (AS-IS/TO-BE), BPMN 2.0, UML Use Cases, Feasibility Studies, Requirements Traceability Matrix (RTM).

Data & AI Analytics: SQL (Advanced Data Mining), Clustering (K-Means/DBSCAN), NLP (BERT/Sentence Transformers), Semantic Matching.

Validation & Quality: User Acceptance Testing (UAT), Solution Validation, Root Cause Analysis (RCA/5-Whys), KPI & Dashboard Design.

Agile & Governance: Jira, Confluence, Scrum/Kanban Frameworks, SDLC Governance, AWS Environment, Advanced Excel (VBA/Macros).

PROFESSIONAL EXPERIENCE

AMAZON — Senior Business Analyst [Senior Compliance Associate] Mar 2022 – Jan 2025

Requirements RADD: Spearheaded the end-to-end **Requirements Analysis & Design Definition (RADD)** for ML-backed governance; authored **Functional Specifications**

Requirements Life Cycle: Managed the **Requirements Traceability Matrix (RTM)** and conducted **Requirements Verification** for Website Audit 2.0 and Mirage 2.0, ensuring 100% alignment between regulatory needs and functional designs.

Process Modeling: Engineered semi-automated workflows by mapping **AS-IS and TO-BE** processes; achieved a 40% reduction in manual latency and a 25-minute reduction in rule-creation time.

Risk & Impact Analysis: Maintained the Program Risk Register and conducted **Impact Assessments**; defined **Non-Functional Requirements (NFRs)** for **Scalability and Latency** that reduced False Positives by 56%.

Solution Validation: Orchestrated **User Acceptance Testing (UAT)** and validation cycles, defining Acceptance Criteria to ensure technical deliverables met all business cases.

AMAZON — Senior Compliance Associate – Operations & Process Jun 2020 – Feb 2022

Root Cause Analysis (RCA): Utilized SQL (Advanced Data Mining) and 5-Whys to perform deep-dive RCA into classification errors, resulting in the mitigation of \$2M+ (AED 7.3M) in potential regulatory risk.

Process Modeling: Designed standardized SOPs and audit frameworks for 75+ high-risk categories, achieving a 30% faster reviewer ramp-up and a 10-point improvement in audit scores.

Stakeholder Elicitation: Partnered with global PMOs to elicit operational requirements, supporting the ingestion of 612K ASINs into classification pipelines.

ENPHASE ENERGY — Technical Support Engineer Mar 2025 – Nov 2025

Systems Thinking: Managed complex technical troubleshooting for solar energy systems, resolving hardware-software integration issues for global customers.

Technical Communication: Acted as a bridge between end-users and product engineering teams, translating technical system failures into actionable Product Improvement Requirements.

EDUCATION

Bachelor of Technology (B.Tech) — HKBK College of Engineering, Bengaluru
